Volume XXIII Number 4

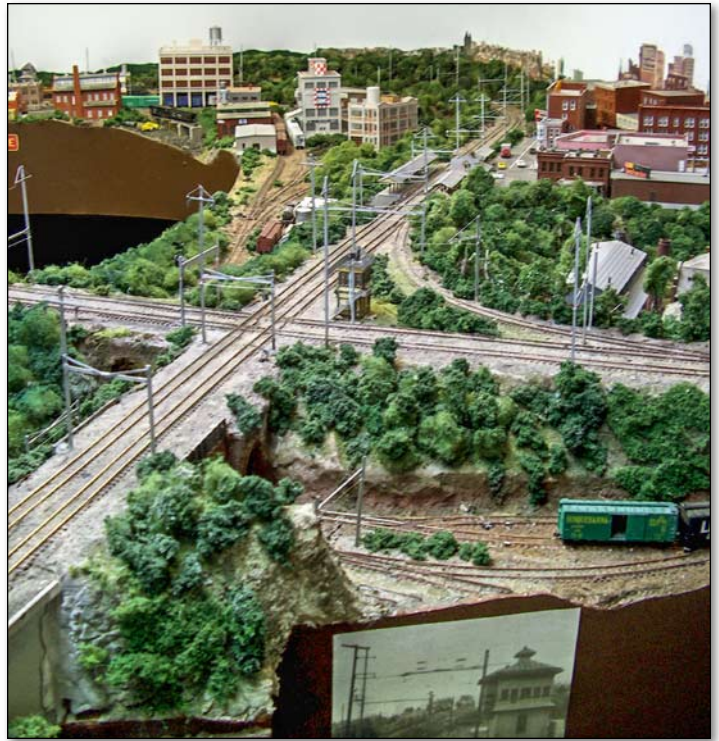

Bill Kepner's N-scale South Penn

SOUTH PENN

Bill Kepner opened the **South Penn** to visitors for the March layout tour. This 24 by 20 foot N-scale layout, set in 1967, has a 9.2 scale mile mainline run and generous staging. CVP's EasyDCC system powers the layout, and 2 computers just coming on-line operate ABS signals driven by Bruce Chubb's CMRI system. Bill uses car cards for his operating system.

The South Penn operates as a subsidiary of the Pennsylvania, partly using grades that were actually built but never used by railroad traffic (the Pennsylvania Turnpike uses much of them today.) Thanks, Bill, for a fine layout tour! <http://billandcindy1.home.attbi.com/sp.html> **I**

Above: The PRR line from Enola to York Haven crosses the line just past the Susquehanna bridge.

Left: This is coal country. Bill's scenic artistry captures the feel of the Pennsylvania mountains.

Below: The Susquehanna bridge greets visitors as they get their first glimpse of the large layout.
